

## Cranesmart Load Indicator System

### Load Indicator Features:

- Cranesmart's load indicators offer a variety of component options to fit all new and used cranes.
- Load monitoring is accurate to within +/- 1%.
- All load monitor components work together through a Cranesmart one panel design, allowing for quick and effective operative use.
- Simple design allows load indicator installs to be performed by the operator within an hour.
- Load indicator wireless design virtually eliminates maintenance.
- Durably built and temperature stress tested to ensure performance in the most extreme environments, with temperatures between -40°F to 140°F (-40°C to 60°C).
- Battery life of 5+ years with free replacement batteries for life.
- The Cranesmart load indicator system provides a practical load monitoring solution for one, two, or three winch lines.
- Self-calibration adjusts for multiple parts-of-line when changing rigging or cranes, improving equipment portability.
- Load monitor solid state components are maintenance free.
- Fast load system equipment deliveries get your cranes safer faster.
- Number one after-the-sale service with professional troubleshooting and available load indicator replacement components minimize crane downtime.
- Insulated from causing wireless interference with other electronic devices.
- Technical specifications are flexible to meet any customer's specific needs.
